

**Amendments to the Specification**

On page 1, please replace the “Field of the Invention” paragraph in its entirety with the following new Field of the Invention:

“The present invention is directed towards a docking light system for watercraft, and more particularly, towards a docking light system that includes an accessory lamp that may be operated as a navigation light, such as a masthead light, a stern light, a port side marker light, a starboard marker light, etc., which is positioned to reduce glare as perceived by an occupant of the watercraft.”

On page 49, please replace the “Abstract of the Disclosure” paragraph in its entirety with the following new Abstract of the Disclosure:

“A docking light system for a watercraft including a docking light fixture, a docking lamp positioned within the docking light fixture, and an accessory lamp mounted to the docking light fixture. The accessory lamp emits light outwardly from the watercraft and is masked to control the horizontal and vertical beam spread sectors of emitted light from illuminating the watercraft causing glare to an occupant of the watercraft. In another aspect, a navigation light is provided on the docking light fixture, where the navigation light may be a masthead light, a stern light, a port side marker light, a starboard side marker light, etc.”
